H2O Project Requirements

We need to create a web page that will allow users to fill out an evaluation form. The evaluations will then create forms that the evaluators can use to compare self-evaluations with the forms that they completed. The website will consist of a login page, which will then take the user to either the Admin or User dashboard. From the admin dashboard, the administrators will be able to review evaluations and compare them, add and delete accounts, and fill out an evaluation for employees. The user dashboard will allow the users to fill out their own evaluations.

Functional Requirements
- Log In should allow both users and administrators to evaluate appropriate employees.
- The administrators should be able to review and compare previous evaluations.
- The site should be accessible from multiple types of devices and browsers.
- Administrators should be able to create and delete accounts.
- Users should be able to fill out their own survey, and administrators should be able to fill out a survey for any employee.
- Forms should have error checking and incomplete or incorrect forms should be not accepted.
- Forms should include a comments section for each category.
- The review page will be able to display various graphs and information relevant to the review process.

Non-Functional Requirements
- The website should be available
- The database should have enough space to accommodate for future entries.
- The login process should be secure.

- The website should be able to allow for additional features that could potentially be added in the future such as student evaluations.
